

# Every Drop Counts

Water is a **vital** resource for our operations and the communities around them. **Water management** is critical as our southern African sites are in **water-scarce** areas.

We reduce freshwater withdrawals, enhance recycling, continuously improve our water-use efficiency, prevent pollution and support host communities.

## Our approach

Zimplats is committed to implementing water stewardship practices that strengthen water security, reduce freshwater withdrawals, enhance recycling, continuously improve water use efficiency and prevent pollution.

## Recent projects:

US\$580 000  
on the following  
initiatives:

- Extension of **Chitsuwa pipeline** to reduce water losses and unauthorised abstraction. Pipeline commissioned in 2024.
- Implementation of the **Turf sewage water recycling** project, which will avail an additional 2 160MI of recycled/re-used water and assist Zimplats in reducing freshwater intake.
- Conducted a **catchment area study** evaluating potential dam sites based on yield and risk.
- **Continued engagement with stakeholders** and advancement of studies into potential water **recycling and water efficiency projects**.
